

Against the imperialist war

The devastating imperialist war continues, at the cost of killing thousands and tens of thousands of wounded, the mass destruction of cities and the displacement of millions.

This war is the continuation of eight years of proxy war between Russia and NATO. The struggle of the imperialist powers over Ukraine is the product of the expansionist policies of NATO and the Western powers and the advancement of these policies under the title of international law and the defense of democracy. Policies that in recent years have turned much of Eastern Europe into a market for tools of war and capital gain, and have plunged countries such as Afghanistan, Iraq, Syria and Libya into misery and destruction.

Now that the global capitalist crisis is deepening and the United States is unable to play its former role as an international police force, imperialist Russia is calling for a halt to NATO advance and the redistribution of markets and areas of influence in Eastern Europe.

What is happening today on both sides of this reactionary war called the anti-war movement in European and Asian countries is part of the general and ideological mobilization of the powers involved in this reactionary war.

The winners of this war are the giant companies producing tools of death and the investors after the destruction. The Ukrainian workers and toilers and their children, along with millions of displaced people, are the main victims of this war.

Against all local governments involved in this imperialist war!

Towards forming the centers of the anti-war movement and organizing the anti-capitalist movement

Long live the international working-class movement
